

**Table 1: Power inverter manufacturers meeting BloombergNEF's Tier 1 criteria as of 1Q 2026**

Firm/Brand	2024 solar inverter production, MW/year
CLOU	

Source: BloombergNEF. Note: Methodology [here](#). List is in reverse alphabetical order. Companies can access the finance deals in BNEF's asset finance database ([link](#)) and download the solar dataset of financings [here](#).

For the first time, Sinexcel, NR Electric, and Hitachi have been added to the list.

CLOU and GE Vernova have returned to the list after being dropped in Q3 and Q4 2025, respectively.

There are no companies that only supply module-level power electronics like microinverters and optimizers on this list as we do not track projects under 5MW of capacity. This is not a reflection of the quality of microinverters, merely that they are generally not used in large solar projects, so banks are unlikely to have conducted due diligence on them.
